NETWORKING 9.00 -10.00

### Technical Talk: GUIDED WAVE INSPECTION - THE FUTURE

**Speaker: Mr. Ian Daniel, Plant Integrity Ltd (A division of TWI, UK)**

### Guided wave Inspection - The Future

Plant Integrity Limited has developed a permanently installed tool-head called Teletest Perm-A-Mount™. This device consists of a transducer array attached directly to the pipe surface providing all the benefits of Teletest Focus Guided Wave Inspection without the problems with Access. Perm-A-Mount is a low-cost, long-life tool installation intended for regular monitoring of piping systems in environmentally hostile, safety critical or difficult to access areas.

## INVITATION FOR NDTSS ANNUAL GENERAL MEETING 2010

Typical Applications for this technique include:

- Road or River Crossings
- Elevated lines
- Insulated lines
- Off shore risers
- Buried lines
- Sub sea lines

The installation process has been developed in conjunction with TWI Ltd's surfacing and corrosion departments and tested to ensure that the tool will not be a future source of corrosion in piping systems.

### About our Speaker

Mr. Ian Daniel has over 25 years O&G inspection experience. Ian has been involved in welding inspection, mechanical testing, NDT, R&D of advanced NDT, RBI, Integrity Management and contract management with companies such as Unit Inspection (1984 to 1992), RTD (1992 TO 1998) and Lloyd's Register (1998 to 2003). Ian has held a management role in TWI since 2004 and is the Sales and Operations Manager for TWI's wholly owned subsidiary company, Plant Integrity Limited based in Cambridge, UK. Plant Integrity Limited services include the development and manufacture of the guidedwave product called Teletest Focus and also support the industry with services that encompass RBI, NDT, Condition Monitoring, Assessment and Repair of O&G assets.

Please register your confirmation on or before 12th September which is highly appreciated to prepare the dinner.
